Functions

→ Reusable block of code

def function_name():

write
return

def sum(a, b)

C = a + b
return C

sum(10, 20)

def average(a):

avg = sum(a) / len(a)

return avg

average([10, 20, 30, 40])

Dictionary

key: element

→ curly bracket

student {

"name": "Naveen",

"age": 21

"course": "python"

}

student["name"] → Naveen
